

# **Cable Lube**

Chemwatch Hazard Alert Code: 1

Chemwatch: 74-7450 Version No: 2.1.1.1 Safety Data Sheet according to WHS and ADG requirements Issue Date: 03/02/2017 Print Date: 08/02/2017 S.GHS.AUS.EN

## SECTION 1 IDENTIFICATION OF THE SUBSTANCE / MIXTURE AND OF THE COMPANY / UNDERTAKING

Product Identifier	
Product name	Cable Lube
Synonyms	Not Available
Other means of identification	Not Available
Relevant identified uses of the	ne substance or mixture and uses advised against
Relevant identified uses	Use according to manufacturer's directions. Lubricant used for pulling electrical wires through conduit.
Details of the supplier of the s	afety data sheet
Registered company name	Bizline
Address	13 Boulevard du fort de vaux, Paris, 75017
Telephone	+ 0 800 311 211
Fax	1

Е	mergency telephone number	
	Association / Organisation	Not Available
	Emergency telephone numbers	+61 3 9728 1644 (RLA Group Technical Manager) business hours
	Other emergency telephone numbers	132766 (Security Monitoring Service)

## SECTION 3 COMPOSITION / INFORMATION ON INGREDIENTS

#### Substances

See section below for composition of Mixtures

#### Mixtures

CAS No	%[weight]	Name
57-55-6	1-10	propylene glycol
Not Available	>60	Ingredients determined not to be hazardous

#### **SECTION 4 FIRST AID MEASURES**

Description of first aid measures			
	If this product comes in contact with the eyes:		
Eye Contact			
	Wash out immediately with fresh running water.		
	- Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids.		
	· Ensure complete imgation of the eye by receiping eyelids apart and away non-eye and noving the eyelids by occasionally intring the upper and tower inds.		
	Seek medical attention without delay; if pain persists or recurs seek medical attention.		
	<ul> <li>Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.</li> </ul>		
	If skin contact occurs:		
	Immediately remove all contaminated clothing, including footwear.		
Skin Contact			
	▲ Flush skin and hair with running water (and soap if available).		
	Seek medical attention in event of irritation.		
Inholation	▶ If fumes, aerosols or combustion products are inhaled remove from contaminated area.		
Inhalation	Other measures are usually unnecessary.		
Ingestion	■ Immediately give a glass of water.		
	First aid is not generally required. If in doubt, contact a Poisons Information Centre or a doctor.		

#### Indication of any immediate medical attention and special treatment needed

Treat symptomatically.

To treat poisoning by the higher aliphatic alcohols (up to C7):

- Gastric lavage with copious amounts of water.
- ▶ It may be beneficial to instill 60 ml of mineral oil into the stomach. ▶ Oxygen and artificial respiration as needed.
- Electrolyte balance: it may be useful to start 500 ml. M/6 sodium bicarbonate intravenously but maintain a cautious and conservative attitude toward electrolyte replacement unless shock or severe acidosis threatens.
- To protect the liver, maintain carbohydrate intake by intravenous infusions of glucose.
- Haemodialysis if coma is deep and persistent. [GOSSELIN, SMITH HODGE: Clinical Toxicology of Commercial Products, Ed 5)
   -----BASIC TREATMENT

patent airway with suction where necessary.

Watch for signs of respiratory insufficiency and assist ventilation as necessary.

Administer oxygen by non-rebreather mask at 10 to 15 l/min.

Monitor and treat, where necessary, for pulmonary oedema.

Anticipate and treat, where necessary, for seizures.

Monitor and treat, where necessary, for shock.

• DO NOT use emetics. Where ingestion is suspected rinse mouth and give up to 200 ml water (5 ml/kg recommended) for dilution where patient is able to swallow, has a strong gag reflex and does not drool.

Give activated charcoal.

ADVANCED TREATMENT

Consider orotracheal or nasotracheal intubation for airway control in unconscious patient or where respiratory arrest has occurred.

Positive-pressure ventilation using a bag-valve mask might be of use. Monitor and treat, where necessary, for arrhythmias.

Start an IV D5W TKO. If signs of hypovolaemia are present use lactated Ringers solution. Fluid overload might create complications.

• If the patient is hypoglycaemic (decreased or loss of consciousness, tachycardia, pallor, dilated pupils, diaphoresis and/or dextrose strip or glucometer readings below 50 mg), give 50% dextrose.

Trademate Cable Lube Page 3 of 10

+ Hypotension with signs of hypovolaemia requires the cautious administration of fluids. Fluid overload might create complications.

▶ Drug therapy should be considered for pulmonary oedema. ▶ Treat seizures with diazepam.

Proparacaine hydrochloride should be used to assist eye irrigation.

EMERGENCY DEPARTMENT

- Laboratory analysis of complete blood count, serum electrolytes, BUN, creatinine, glucose, urinalysis, baseline for serum aminotransferases (ALT and AST), calcium, phosphorus and magnesium, may assist in establishing a treatment regime. Other useful analyses include anion and osmolar gaps, arterial blood gases (ABGs), chest radiographs and electrocardiograph.
- Positive end-expiratory pressure (PEEP)-assisted ventilation may be required for acute parenchymal injury or adult respiratory distress syndrome.
- Acidosis may respond to hyperventilation and bicarbonate therapy.
- Haemodialysis might be considered in patients with severe intoxication.
- Consult a toxicologist as necessary. BRONSTEIN, A.C. and CURRANCE, P.L. EMERGENCY CARE FOR HAZARDOUS MATERIALS EXPOSURE: 2nd Ed. 1994

For C8 alcohols and above. Symptomatic and supportive therapy is advised in managing patients.

#### **SECTION 5 FIREFIGHTING MEASURES**

#### Extinguishing media

Alcohol stable foam.

- Dry chemical powder.
- BCF (where regulations permit).
   Carbon dioxide.

#### Special hazards arising from the substrate or mixture

Fire Incompatibility	None known.
Advice for firefighters	
	<ul> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> </ul>
Fire Fighting	Wear breathing apparatus plus protective gloves in the event of a fire.
	Prevent, by any means available, spillage from entering drains or water courses.
	■ Use fire fighting procedures suitable for surrounding area.
Fire/Explosion Hazard	- Non combustible.
	■ Not considered a significant fire risk, however containers may burn.
	May emit corrosive fumes.
HAZCHEM	Not Applicable

#### SECTION 6 ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures See section 8

# Environmental precautions

See section 12

#### Methods and material for containment and cleaning up

	► Clean up all spills immediately.
Minor Spills	▶ Avoid breathing vapours and contact with skin and eyes.
	▶ Control personal contact with the substance, by using protective equipment.
	▶ Contain and absorb spill with sand, earth, inert material or vermiculite.
	Moderate hazard.
Major Spills	Clear area of personnel and move upwind.
	▶ Alert Fire Brigade and tell them location and nature of hazard.
	▶ Wear breathing apparatus plus protective gloves.

## SECTION 7 HANDLING AND STORAGE

Precautions for safe handling		
Safe handling	DO NOT allow clothing wet with material to stay in contact with skin Avoid	
	all personal contact, including inhalation.	
	▶ Wear protective clothing when risk of exposure occurs	
	Use in a well-ventilated area.	
	Prevent concentration in hollows and sumps.	
	- Store in original containers.	
Other information	⊾ Keep containers securely sealed.	
	▶ Store in a cool, dry, well-ventilated area.	
	Store away from incompatible materials and foodstuff containers.	
Conditions for safe storage	ge, including any incompatibilities	

Suitable container	<ul> <li>Polyethylene or polypropylene container.</li> </ul>				
	Packing as recommended by manufacturer.				
	► Check all containers are clearly labelled and free from leaks.				
Storage incompatibility	Alcohols – are incompatible with strong acids, acid chlorides, acid anhydrides, oxidising and reducing agents.  • reacts, possibly violently, with alkaline metals and alkaline earth metals to produce hydrogen • react with strong acids, strong caustics, aliphatic amines, isocyanates, acetaldehyde, benzoyl peroxide, chromic acid, chromium oxide, dialkylzincs, dichlorine oxide, ethylene oxide, hypochlorous acid, isopropyl chlorocarbonate, lithium tetrahydroaluminate, nitrogen dioxide, pentafluoroguanidine, phosphorus halides, phosphorus pentasulfide, tangerine oil, triethylaluminium, triisobutylaluminium • should not be heated above 49 deg. C. when in contact with aluminium equipment				

# SECTION 8 EXPOSURE CONTROLS / PERSONAL PROTECTION

#### **Control parameters**

## OCCUPATIONAL EXPOSURE LIMITS (OEL)

## INGREDIENT DATA

Source	Ingredient	Material name	TWA	STEL	Peak	Notes
Australia Exposure Standards	propylene	Propane-1,2-diol total: (vapour & particulates) / Propane-	474 mg/m3 / 10 mg/m3 /	Not	Not	Not
	glycol	1,2-diol: particulates only	150 ppm	Available	Available	Available

## EMERGENCY LIMITS

Ingredient	Material name		1	TEEL-2	TEEL-3
propylene glycol	Polypropylene glycols	30 mg/m3		330 mg/m3	2,000 mg/m3
propylene glycol	Propylene glycol; (1,2-Propanediol)	30 mg/m3		1,300 mg/m3	7,900 mg/m3
Ingredient	Original IDLH		Revised IDLH		
propylene glycol	Not Available		Not Available		
Ingredients determined not to be hazardous Not Available Not Available					

#### Exposure controls

Appropriate engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be added as the two or the basic types of engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be added as the two or two			
controls	controls are:		
	Process controls which involve changing the way a job activity or process is done to reduce the risk.		
	Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" an "removes" air in the work environment.		
Personal protection	_

## SECTION 10 STABILITY AND REACTIVITY

Desetheite	December 7
Reactivity	See section 7
Chemical stability	■ Unstable in the presence of incompatible materials.
	▶ Product is considered stable.
	► Hazardous polymerisation will not occur.
Possibility of hazardous	
reactions	See section 7
Conditions to avoid	See section 7
Incompatible materials	See section 7
Hazardous decomposition products	See section 5

## SECTION 11 TOXICOLOGICAL INFORMATION

	The material is not thought to produce adverse health effects or irritation of the respiratory tract (as classified by EC Directives using animal models).
Inhaled	Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable control measures be used in an occupational setting.
	Not normally a hazard due to non-volatile nature of product
	The material has NOT been classified by EC Directives or other classification systems as "harmful by ingestion". This is because of the lack of corroboratin
Ingestion	animal or human evidence.
Skin Contact	There is some evidence to suggest that this material can cause inflammation of the skin on contact in some persons.
Eye	There is some evidence to suggest that this material can cause eye irritation and damage in some persons.
	Long-term exposure to the product is not thought to produce chronic effects adverse to the health (as classified by EC Directives using animal models
Chronic	nevertheless exposure by all routes should be minimised as a matter of course.

## **SECTION 16 OTHER INFORMATION**

#### Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.
